CounSOL America LLC Product Backlog

50 Client Aligned User Stories

This backlog translates the client discovery responses into 50 concise user stories for CounSOL America's Google-first operating platform. The stories focus on the workflows requested by Robert Wolff, consulting clients, installation partners, and vendor or supplier contacts.

System scope: Client standards reflected: cloud-hosted delivery; Google Workspace compatibility; Supabase-compatible system of record; automated workflows; Claude-assisted document and compliance analysis; mobile and low-bandwidth access; role-based views; Google Sheets and PDF exports; Gmail communications; secure audit-ready records; and growth from approximately 25 partners to 100 or more.

Intake and Partner Onboarding

- **US-01:** As a prospective client, I can submit the CounSOL America contact and intake form so that my request enters the system of record instead of remaining only in an inbox.
- **US-02:** As a CounSOL administrator, I can receive each website submission as a structured record with the submitter, organization, contact details, and request summary so that I do not re-enter data manually.
- **US-03:** As an installation partner, I can submit onboarding information, contacts, service regions, and program details from a phone or tablet so that I can join a CounSOL-managed program with minimal training.
- **US-04:** As a vendor or supplier contact, I can submit equipment certifications, FEOC information, Safe Harbor addendums, and other required documents so that CounSOL can evaluate my compliance readiness.
- **US-05:** As Robert Wolff or a CounSOL administrator, I can review new client, partner, and supplier submissions, assign an owner, and set a workflow status so that every intake item has a clear next step.

Partner and Vendor Management

- **US-06:** As a CounSOL administrator, I can create and maintain a partner record with the partner name, address, contacts, tier, status, agreement date, and insurance expiration so that partner information is centralized.
- **US-07:** As an installation partner, I can view my organization's approved profile, program status, contacts, and required actions so that I know what CounSOL expects from my company.
- **US-08:** As a CounSOL administrator, I can record insurance certificates, partner agreements, and renewal dates so that I can verify that each partner remains eligible.
- **US-09:** As a client representative, I can view the installation partners assigned to my program so that I can understand who is managing equipment and compliance activities.
- **US-10:** As a CounSOL administrator, I can search and filter partners by tier, status, region, client program, or compliance state so that I can find the right organization quickly.
- **US-11:** As an external partner, I can access only my organization's records and assigned tasks so that other partners cannot see confidential financial or operational information.
- **US-12:** As a vendor manager, I can maintain supplier contacts, equipment capabilities, certification status, and relationship notes so that qualified suppliers can be reused across programs.
- **US-13:** As a CounSOL administrator, I can manage approximately 25 to 50 active partners today and add partners as the network grows so that the platform can support 100 or more partners without a redesign.

Safe Harbor Compliance

- **US-14:** As a compliance manager, I can apply the seven-point Safe Harbor checklist to each supplier or vendor so that every partner is evaluated using a consistent process.
- **US-15:** As a compliance manager, I can record checklist responses and supporting evidence for IRS Notice 2026-15 so that CounSOL can document the basis for each compliance decision.
- **US-16:** As a compliance manager, I can record documentation aligned with IRS Notice 2025-08 so that predecessor guidance can be preserved when a program requires it.
- **US-17:** As a compliance manager, I can track FEOC and non-FEOC distinctions, MACR thresholds, and Section 45X supplier documentation so that program requirements are visible at the supplier level.
- **US-18:** As a vendor contact, I can upload a certification, addendum, or scanned form up to 50 MB so that CounSOL can review the complete supporting record.
- **US-19:** As a compliance manager, I can flag missing, incomplete, or conflicting evidence so that a vendor gap analysis identifies the action needed before approval.
- **US-20:** As a compliance manager, I can receive alerts before a certification, insurance record, or agreement expires so that required renewals are completed on time.
- **US-21:** As a compliance manager, I can view an immutable version history of each compliance document and checklist change so that the record is defensible during an IRS or client audit.

Inventory Serial Numbers and Shipments

- **US-22:** As an installation partner, I can scan or enter an equipment serial number and barcode when a shipment is received so that each unit is recorded at the point of receipt.
- **US-23:** As an inventory coordinator, I can store a device ID, SKU, shipment ID, partner receipt date, installation date, and PTO date so that equipment can be traced through its full lifecycle.
- **US-24:** As an inventory coordinator, I can connect serial number records to Enphase Installer Platform or Enlighten data so that device status and installation information remain current.
- **US-25:** As a field representative, I can flag a unit as defective on arrival and document the issue so that DOA equipment is handled through a defined protocol.
- **US-26:** As a field representative, I can record a post-PTO issue against the affected unit, partner, and installation so that recurring problems can be investigated.
- **US-27:** As a logistics coordinator, I can track an outbound shipment by origin, destination partner, carrier, ship date, ETA, delivery confirmation, and cost so that equipment movement is visible.
- **US-28:** As a logistics coordinator, I can receive shipment updates from carrier portals such as UPS Freight or Old Dominion so that delivery status does not depend on manual email updates.
- **US-29:** As a program manager, I can reconcile shipment logs, partner receipts, serial numbers, and Safe Harbor records so that discrepancies are identified before they affect reporting or compliance.

Site Visit Workflow

- **US-30:** As a field representative, I can complete a pre-visit checklist for a partner so that I arrive prepared with the required questions and documents.
- **US-31:** As a field representative, I can capture visit responses, notes, photos, and compliance flags from a phone or tablet so that information is recorded at the partner site.
- **US-32:** As a field representative, I can continue collecting information during a low-bandwidth or temporarily offline visit and synchronize it later so that limited mobile service does not interrupt the visit.
- **US-33:** As a site visit coordinator, I can generate a structured post-visit report in Google Slides or PDF so that findings are ready for client review without manual reformatting.
- **US-34:** As a program manager, I can assign follow-up action items with owners, due dates, and statuses so that site visit findings lead to measurable corrections.
- **US-35:** As a CounSOL administrator, I can draft and send a partner debrief email through Gmail using the completed visit information so that communication is timely and consistent.

Scorecards and Reporting

- **US-36:** As a scorecard manager, I can maintain approximately 85 scored questions for each partner so that the assessment reflects the full CounSOL program framework.
- **US-37:** As a scorecard manager, I can calculate a partner score from structured responses and supporting evidence so that results are consistent across the active client portfolio.
- **US-38:** As an installation partner, I can view my scorecard results and required improvements so that I understand how to strengthen program performance.
- **US-39:** As a client representative, I can view program dashboards for compliance rates, partner volume, inventory reconciliation, and site visit activity so that I can make informed decisions.
- **US-40:** As a program manager, I can identify concentration risk when one partner represents a disproportionate percentage of total program volume so that corrective action can be planned.
- **US-41:** As a stakeholder, I can export scorecards and operational reports to Google Sheets and PDF so that I can use familiar formats for analysis, meetings, and client deliverables.

Documents Communications and Automation

- **US-42:** As a CounSOL administrator, I can store certifications, insurance records, contracts, scorecards, and program reports in Google Drive folders linked to their partner or program record so that documents are easy to find.
- **US-43:** As a compliance manager, I can search documents by partner, supplier, certification type, expiration date, or checklist status so that I can retrieve evidence without browsing unrelated folders.
- **US-44:** As a program manager, I can trigger automated workflows when a form, document, shipment update, or scorecard changes so that routine follow-up does not depend on manual reminders.
- **US-45:** As Robert Wolff, I can use the system to draft partner emails, compliance updates, reports, SOWs, or engagement documents so that recurring communications are prepared consistently and efficiently.

Access Security Performance and Administration

- **US-46:** As an authorized user, I can sign in with Google SSO and receive a role-based view so that CounSOL administrators, field representatives, clients, and external partners see only appropriate tools and data.
- **US-47:** As a platform administrator, I can manage users, roles, configurations, and workflows without ongoing developer support so that Robert or a part-time administrator can maintain daily operations.
- **US-48:** As a stakeholder, I can open standard partner records and dashboards in under three seconds so that time-sensitive compliance and site visit work is not delayed.
- **US-49:** As a platform administrator, I can rely on encryption in transit and at rest, automated backups, disaster recovery, and business-hour availability of at least 99 percent so that partner and compliance data remains secure and accessible.
- **US-50:** As an integration administrator, I can connect Google Workspace, Enphase, carrier portals, future accounting software, and other services through open APIs or webhooks so that the Google-first platform can evolve without Microsoft dependencies.
